

Heras Mobile Fencing & Security introduces the City Fence

## Concealed from prying eyes

**City Fence, the new closed panel from Heras Mobile Fencing & Security, for use on building sites and other applications, is ideal for screening, demarcation and security purposes.**

Concealing your building site from the prying eyes of potential pilferers can go long way to protecting your valuable materials. What's more, it can help bring about improved traffic circulation anywhere in the urban setting: screening off your site will mean that drivers concentrate on the traffic and not on your building activities, improving all-round safety for road-users and building workers alike. A closed panel will also minimise the risk of dust and other emissions escaping the site. Last but not least, the City Fence unmistakably demarcates the perimeter of your building site.

The use of mobile hoardings contributes to security in general and helps prevent theft and vandalism. These closed anti-graffiti panels offer a cheaper alternative to wooden hoardings and give a tidier and more attractive appearance, which will not only enhance your on-site corporate image, but also provide an extra incentive to building workers.

*Combi Fence, half open fence with Anti Climb mesh*

*Combi Fence*

*Strut design including concrete bases*

## City Fence: temporary or permanent

The City Fence concept is a flexible and solid way of achieving high levels of security for temporary purposes. It is ideal in situations where a "see-through" panel is otherwise inadequate. The City Fence is the perfect addition to the new security concept from Heras and is fully compatible with other security accessories, such as the High Security clamp. The special strut design and the concrete base provide added assurance. As an alternative to this mobile option, you can also choose to employ a semi-permanent structure, which uses ground-driven posts instead of the strut design and is ideal for use in constricted areas.

<b>City Fence</b>
<b>Frame</b> 2200 x 2070 mm, hot-dipped galvanised, all-round welding
<b>Wall thickness</b> 2 mm
<b>Weight</b> approx. 48 kg
<b>Element</b> Panel is interchangeable
<b>Colour</b> Red (RAL 3020) and White (RAL 9010), other colours on request
<b>Fastening</b> Using standard clamp or High Security clamp
<i>Different sizes, models available on request.</i>
